

Amplified docking station for iPod's and most popular mp3 reader's use. It has been developed in order to resist to vibrations, typical in moving means of transport ; low operating voltage (continuous current). Being amplified it can be connected directly to each kind of loudspeaker (from 4 to 16 ohm). Furthermore it can interface itself with other audio systems thanks to its outputs and to its aux input. Ideal for wall fixing.

size

Characteristic

- Self turn-on/off : in presence of an audio signal it turns on and after 90 sec. of its absence it turns off.
